This instrument is used for event recording of verbal behavior related to student skill attempts and does not include data related to student social behavior. This instrument can be used in a “live” teaching setting or in conjunction with audiotaped or videotaped lessons.

In coding the data, record only the verbal behaviors that occur in response to student skill attempts. Record each event with a check or tally (slash) in the appropriate box in the table below. *Write each feedback statement on a separate sheet of paper.*
